

## Comp 484 Project 1

**Due** TBD (Check on Canvas)

**Purpose:** In this project you are going to create the HTML and CSS for a website to match a consistent look and feel.

**Requirements:** To complete this project you will write and submit 5 files: 4 HTML documents and 1 CSS document. The CSS file should contain the main style and formatting of the project. You may use glitch or any editor that you prefer. For this project no use of libraries or automated CSS code-generation will be allowed. I want you to come up with the structure of your site and write the HTML and CSS that you feel fits that style. You may use lecture slides and the past hw's for sample code but make sure to make it your own.

The purpose of this lab is to create a personal site about one of your interests. Examples include but are not limited to: favorite movie, show, book, artist, band, genre, sport, team, person, place to visit, etc. Be as creative as you wish if you have another idea for your site we can further discuss in person.

Review lecture material and make proper use of the elements, properties, and roles covered.

### **What I will be grading on:**

- Submission instructions followed (4 html and 1 css file submitted, with no contents except plain-text HTML and CSS respectively)
- HTML and CSS has proper formatting and comments where appropriate
- Web page renders properly in Chrome
- Web page contains all required content, visually organized and styled according to spec
- CSS rules and HTML tags abide by specifications given
- Look up the MDN reference site for **3 elements** not covered in class. Use them on your website.

**Cheating:** This project will be an individual project. You can discuss this project with other students. You can explain what needs to be done and give suggestions on how to do it. You cannot share source code. If two projects are submitted which show significant similarity in source code then both students will receive an F for the project. Note a person who gives his code to another student also fails the project (you are facilitating the dishonest actions of another).
